

Run simple with the most advanced in memory platform, SAP HANA, the next generation business suite - HTC can help you migrate

HANA

Reaching out... through IT®

SAP HANA, the most advanced in-memory platform

SAP HANA is an in-memory data platform that is deployable as on premise appliance / in the cloud. It is an ideal and revolutionary platform for performing real-time analytics, and developing and deploying real-time applications. SAP HANA database is the core and is fundamentally different from any other database engine available today.

Why SAP HANA

SAP HANA is well-suited for organizations that need to go deep within their enormous, different types, and sources of data sets to ask complex and interactive questions. The increasing need for this data is to be recent, in real-time, at high speeds (requiring very fast response time and true interactivity), and do this without any pre-fabrication (no data preparation, no pre-aggregates, no-tuning). Only SAP HANA effectively addresses this unique combination of requirements.

Real-time Analytics

- Operational Reporting (real-time insights from transaction systems such as Sales Reporting, Financial Reporting, Shipping Reporting, Purchasing Reporting, and Master Data Reporting)
- Data Warehousing (SAP NetWeaver BW on HANA - BW applications run on SAP HANA platform at exceptional speeds and improved operational efficiency)
- Predictive and Text Analysis on Big Data (on large volumes of data in real-time - a robust way to leverage unstructured data)

Real-time Applications

- Core Process Accelerators (accelerate business reporting)
- Planning, Optimization Apps (Sales and Operational Planning, BusinessObjects Planning and Consolidation, Cash Forecasting, ATP calculation, Margin calculation, Manufacturing scheduling optimization, and more)
- Sense and response apps (real-time personalized insights and recommendations on Big Data such as smart meter data, point-of-sale data, social media data, text search and mining, and predictive analytics)

SAP HANA permits creating data-intensive next-generation applications that exploit the digital economy without the constraints of cost and performance while increasing transaction speed and simplifying your SAP landscape.

HTC an Authorized SAP Partner

- HTC Global Services is an authorized SAP Partner
- 15+ years of consulting, implementation and support experience
- Our SAP Center of Excellence (CoE) with its certified team of technical and functional consultants helps organizations of all sizes across industries to transform their business potential, improve business operations, and open new business channels

Value and Benefits

- Increased efficiency through optimized finance and supply chain processes and reporting.
- Reduced time to value, utilizing proven SAP Best Practices
- Improved enterprise wide business processes through the use of a drastically simplified SAP Fiori user interface and SAP HANA in memory technology

SAP HANA Migration Case Study

A multinational automotive products manufacturer in India was managing operations with SAP ECC 6.0 having all the standard modules. Rapid increase in DB size imposed complexities:

- Getting timely business insights due to inefficient retrieval of data from current the DB
- Maintaining multi system landscape for different applications
- Managing different systems for OLAP and OLTP transactions
- Monitoring decentralized systems and inability to focus on core business process
- To improve operational efficiency, the client contracted HTC to migrate:
- ERP: SAP ECC 6.0 EHP 7 Unicode System to SAP Business Suite on HANA Cloud Landscape (AWS)
- OS: Windows Enterprise server 2008 to Suse Linux Enterprise server 2012
- DB: Oracle 11.2.0.4.0 to HANA SPS10 (DB size: 320 GB)

The Key benefits of this migration

- Cloud computing and in memory improved performance, significantly reduced hardware and maintenance costs
- Real-time business insights, better, faster decisions, and greater analytic flexibility
- Faster system performance
- Multi-tenancy DB for many applications
- Centralized system landscape and higher system visibility
- Improved planning, forecasting, and financial close processes

About HTC:

- Over 26 years of IT and BPO experience in providing cost effective and innovative services across domains for a wide spectrum of global 2000 customers
- Quality and information security processes compliant to SEI CMM Level 5, ISO 9001, ISO 27001 and PCI DSS standards
- Global presence, large delivery centers, talented professionals, capabilities across multiple technologies, platforms and domains
