

Digitization of Eighteenth Century Historical Works

A Large Publishing Company

A leading content provider for higher education, professionals, and library markets worldwide

Project/Service Category

Archival Digitization

Services Provided

- Microfilm scanning
- Image enhancement
- Indexing

Customer Speak

The quality of images and XML data that you have delivered has helped us create a highly sophisticated digital library. This has revolutionized the way research is done using old English books.”

- Director – Technology

Background

The client wanted to digitize (convert as images and XML data) more than 150,000 printed books of the 18th century available as microfilms, and publish the digital editions for enabling easy search, retrieval, display, and print.

Solution

This project involved creating a digital edition of more than 150,000 printed books having over 46 million pages within a time span of one year for web availability. To achieve this, HTC leveraged its Imaging and Document Management framework to deliver over 3.5 million pages per month. This framework enabled HTC to perform image capture, Optical Character Recognition (OCR), capture optional items (index fields, table of contents, etc.), and generate XML output of the text according to the client's specifications.

Benefits

- Easy search and retrieval of the digitized collection
- Enabled a large number of users to easily access the digital books anytime and anywhere
- Ability to reuse existing resources limited by its format such as the materials stored on microfilm

www.htcinc.com

- Over 27 years of IT and BPO experience in providing cost effective and innovative services across domains for a wide spectrum of global 2000 customers
- Quality and information security processes compliant to SEI CMM Level 5, ISO 9001, ISO 27001 and PCI DSS standards
- Global presence, large delivery centers, talented professionals, capabilities across multiple technologies, platforms and domains
