Agile Services

Match the pace of business demands with high-speed software development

Meet the Demands of the Digital Age

The digital age demands high digital relevance, clear digital visibility, and quick time to market. Speedy software development with the ability to adapt quickly with quality to the emerging technology and business changes are vital for business success. This requires closing the gaps between your IT, digital demands, changing technology and business trends, and rising customer expectations. Leveraging agile will help you to move faster in the connected world and stay ahead in the changing times.

Move Faster with Agile and Emerging Technologies

The combination of Agile and emerging technologies will help you to develop IT applications that can manage the pace of the changing times. Agile does this by shortening the time to market, accommodating the demands of the changing times, and driving productivity. It also enables you to expand innovation, improve efficiency, accelerate business potential, and drive better business outcomes. The main reason to adopt Agile is in its ability to provide the means to the end and deliver quick value to the business on a repeatable, reliable, and rapid manner.

Agile Necessitates Adopting New Practices / Work Culture

Agile has immense potential to deliver rapidly evolving software and bring in substantial business benefits with quicker time to market. However, this requires adopting new practices / work culture by the business and IT teams to shape the deliverables. This transition involves changing deep-rooted cultural patterns and processes. HTC Agile services can guide you through this transformation and help you overcome challenges.

Combining Agile with Lean

HTC combines agile with lean by bringing in synergy across the three key aspects – people, process, and technology. Our Hybrid Agile Model is based on best practices from key agile methodologies from Scrum, Lean and Extreme programming. It leverages DevOps to gain velocity and bring greater efficiencies across the development and operation phases. This enables quick and continuous delivery of high-quality software applications that meet clients' stringent requirements.

Enabling you to Take Agile to the Next Level

HTC helps its clients to take Agile to the next level with wider and seamless adoption for delivering greater business value. However, this brings in numerous challenges such as getting your teams to communicate in the same wavelength, ensuring that you have the proper frameworks, clarifying processes, and scaling to meet business demand. HTC's Lean Agile Training Services can help you balance these challenges.

Reimagine technology to accelerate your business

HTC's Lean Agile Services

HTC's Lean Agile services can help you to optimize the value you receive from adopting the new, lean, and agile ways of working. We will ensure that your teams maximize their capability uplift, speedup transition, and reduce productivity decline all through the way. Our Lean Agile training and mentoring services focus on upskilling and refresher training, agile coaching and mentoring, project kick-off and facilitation, and on-the-job coaching and mentoring of agile teams, scrum masters, product owners, and managers.

Simplifying your Agile Journey

Although Agile-based development offers several advantages, most organizations are at the crossroads when it comes to choosing a specific path. Therefore, organizational culture and mindset are critical to the success of distributed agile projects. You need the right partner who can address all these issues and deliver projects efficiently.

HTC simplifies your agile journey. We help you identify your critical business objectives and align agile principles to your road map that allows you to seamlessly transform the processes within your organization. For agile practices to become mainstream, and deliver maximum value to the business, they need wider adoption across the application development landscape to become "business as usual" for practitioners, products, and programs. The challenges are numerous - from getting your teams communicating in the same wavelength to ensuring that you have the proper framework to measure your progress.

HTC's Lean Agile Training and Mentoring Services

HTC goes beyond consulting and software development to bring about the culture of Agile in our client's organization. We do this with our multi-tier approach for agile management and to take Agile to the next level. We outline the path to your agile journey and everything you need to get started on your transformation, bringing clarity to processes and mastery to tools and techniques. Our practice-based approach ensures that you do not lose the value of what had been done before.

HTC helps its clients to get started on their agile transformation journey and continuously evolve to meet their business objectives. We focus on organizational cultural change and engineering excellence to offer customized role-based training and hands-on coaching for different levels in the organization - executive, business, development, support, and delivery teams.

Our comprehensive Lean Agile services include:

- Agile Executive Workshop
- Agile Team Leader Bootcamp
- Agile Academy for Teams
