

CMP NextGen

Modern, Enterprise-Grade Case Management for Prosecutors

Prosecution today is
fundamentally different
from what it was a
decade ago.

**The CMP NextGen
is ready for the future.**

Overview

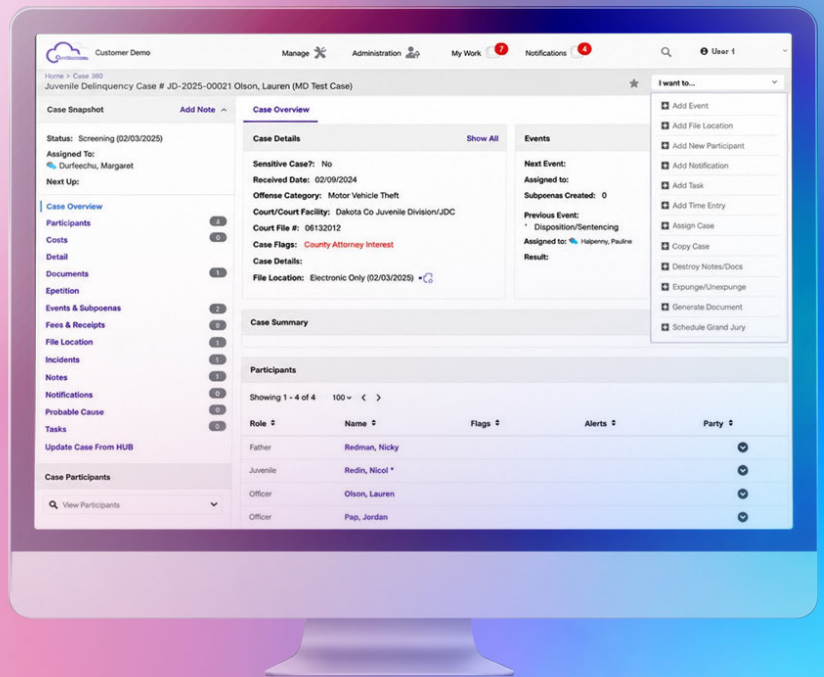

Cases move across agencies, jurisdictions, and an increasingly connected justice ecosystem with unprecedented complexity. Prosecutors are expected to move faster, collaborate more broadly, and uphold increasingly rigorous standards of transparency, accountability, and compliance.

At the same time, offices are being asked to do all of this with fewer staff, tighter budgets, and growing administrative burden. Most offices are managing these demands on infrastructure built for a different era. That gap does not stay still. It compounds.

CMP NextGen is built to close that gap. Developed by the team behind CRIMES, CiberLaw, and Integrated Justice eXchange, it brings together 25 years of experience serving the justice community with a deep understanding of what modern prosecution actually requires.

CMP NextGen, Purpose-Built for Modern Prosecution

Platform Highlights

Cloud-native SaaS
deployment

Browser-independent
access

Role-based
dashboards

API-first integration
architecture

CJIS-ready security

Configurable
workflows

CMP NextGen is an enterprise-grade, cloud-native prosecutor case management platform built specifically for public attorney offices. It provides a unified operational environment where prosecutors, investigators, victim advocates, supervisors, and administrative staff work from a single source of truth across criminal, civil, juvenile, and family matters.

It modernizes the entire public attorney office by replacing fragmented processes with connected operations. Case information, documents, digital evidence, workflows, analytics, and external justice systems come together in one platform, delivering secure, real-time access to the right information for the right person, at the right time.

Delivered as a SaaS solution, **CMP NextGen** offers flexible subscription models, including fixed monthly, per-seat, and volume-based pricing. Built on HTC's Roots Framework using a microservices-based, containerized architecture, it delivers the scalability, configurability, and resilience needed to support both today's operational demands and the future of prosecution.

Built around the Way Prosecutors Work

Role-Based Work Queues

A centralized workspace that organizes cases, tasks, events, assignments, and notifications by role. Prioritized work queues improve visibility, streamline daily activities, and keep cases moving on schedule.

Modern Analytics

Interactive dashboards provide real-time insight into caseloads, assignments, case status, and court activity. Share visualizations, publish public dashboards, and support faster operational and supervisory decisions.

Cross-Agency Collaboration

Securely exchange case information with law enforcement, courts, probation, diversion programs, and other justice partners through connected workflows. Constituent portals also support complaints, referrals, and public information access.

Anywhere, Anytime Access

Cloud-native and browser-independent, CMP NextGen provides secure access to case information, documents, and workflows from the office, courtroom, home, or the field across any device.

Digital Evidence and Document Management

Generate legal documents while managing police reports, digital evidence, video, audio, images, and files within a unified case workspace. All content remains connected to the case for immediate access and complete context.

Enterprise Capabilities

Case Management | Court Operations | Workflow Automation | Document Generation | Digital Evidence
| Constituent Portals | Justice Agency Sharing | Analytics | Reporting | Search | Docket Management
| Notifications | Audit Trails | Role Management | Integration Services

Engineered for Modern Justice

Why CMP NextGen

- Digitize all case management tasks and eliminate the need to manage physical case files.
- Generate letters, motions, subpoenas, and charging documents in lockstep as cases progress.
- Keep processes on schedule with Active Workflow that automatically triggers next steps.
- Streamline workflow across partner agencies to ensure deadlines are met across the jurisdiction.
- Connect to the digital evidence ecosystem that modern prosecution depends on
- Provide anytime, anywhere access to the right information for the right people.
- Stay ahead of changing regulations with easier in-house configuration capabilities.
- Save time and control labor costs by automating manual and paper-based processes.

MyWork Dashboard

Role-based MyWork dashboards organize workloads by user, team, unit, or department, providing complete visibility into priorities and pending actions.

Cloud-Native & Browser-Independent

API-first, cloud-native architecture on AWS with secure browser-independent, multi-channel access from virtually any device.

Intelligent Workflow Automation

Integrated configurable workflows combined with Active Business Process Management (BPM) automate routing, enforce business rules, and eliminate operational bottlenecks.

CJIS-Ready Security

CJIS-ready security with comprehensive audit trails, role-based access controls, and defensible case management.

Advanced Search & Document Management

Powerful context-based search across all case data with template-driven document generation and fully integrated document management.

Connected Stakeholder Portals

Secure constituent portals for prosecutors, officers, victims, witnesses, and citizens to improve communication and collaboration.

Flexible Jurisdictional Configuration

Configurable workflows, forms, and business rules tailored to local prosecution practices, policies, and jurisdictional requirements.

About HTC Global Services

HTC Global Services is a leading global provider of innovative IT and Business Process Services and Solutions. Established in 1990 with headquarters in Troy, Michigan, USA, HTC combines extensive technical and domain expertise with a collaborative business partner approach to help organizations modernize operations, accelerate digital transformation, improve operational efficiency, and maximize business value through secure, scalable, and future-ready technology solutions.
